

Hi, here's your case!

This case forms the input for your presentation. We are keen to find out more about your insights, way of thinking and technical skills. There's no right or wrong in your answers. This assignment is both for you and us to see if we could be a match.

You've got one lifeline: you can call/mail/Whatsapp Alon to ask questions and find answers.

Please send the completed assignment at the indicated deadline and as instructed in the accompanying email.

Before we get started 🚀

bit

Case

It's time to generate a map and routes!

This assignment has been created to test your skills in programming, mathematics and problem solving. In 8 hours, you should get far.

The program should do the following:

- ❑ A map of an area (such as the land on Earth) should be visible on screen.
 - It should be visible in browser.
- ❑ On command, you can generate a new map.
 - For example by refreshing or pushing a button.
- ❑ With the click of a mouse, you can select two locations on the map.
 - Your program calculates and shows the most efficient route between the points.

You are free to choose what language or libraries to use. Balance the amount the amount of work that your chosen stack takes out of your hands with extra features and creativity.

Case

The Map

A map should consist of at least the following terrain types:

- a. Water
- b. Land
- c. Mountains
- d. Snowy tops

- ❑ The terrain needs to be randomly generated.
- ❑ How far you want to go is up to you. You can do textures, or also shape the actual heights.
- ❑ In case you want to go all out, you can vary the landscapes, the type of terrains or anything else you think is cool to show. Get creative 🚀

Case

The Route

A route is generated between the two selected points.

- ❑ The route should take terrain types into account. For example, the route cannot go across water, mountains might take a longer time to traverse.
- ❑ Think about how your routing algorithm should logically work.
- ❑ Take performance into account.

Case

The presentation

You are in charge of what to present and how to present it. We will have some questions of course!

At the presentation we will see you again, and we are excited to see what you have built!

Good luck 🚀

That's it,
let's chat
